information/declaration-open-and-transparent-government**

Definitions

Public data is non-personal, unclassified and non-confidential data:
• collected, commissioned or created by the agency in carrying out its functions or statutory responsibilities;
• publicly funded; and for which there is no restriction:
    a) in the case of copyright works, to its release and re-use, in accordance with NZGOAL , under any of the Creative Common NZ law licences, or
    b) in the case of non-copyright material, to its open release and re-use.

High value public data is data which, when re-used, has one or more of the following impacts:

Economic & social outcomes	Transparency & democratic outcomes	Efficiency outcomes
Business can use it to add value, innovate & create new products to spur economic growth	It reports on the performance of an agency or service	It supports cross-sector service delivery, e.g. other agencies & NGOs can use it to improve their services
Business and communities can use it to: • develop useful applications/new services • make informed decisions about the government services they use • make informed decisions that improve their quality of life	It provides details of government funding and/or expenditure	Releasing it for re-use could: • make it easier for government agencies to work together • reduce the cost of providing an existing government service • reduce the cost of accessing and processing this information for existing users
It provides information about sustainability and risk.	It provides an evidence base informing & encouraging external participation in policy development	It helps align central &l ocal government initiatives through a more coordinated national view of government data
