

# New Zealand’s Data Strategy and Roadmap

The Roadmap - through four focus areas - will enable organisations within and outside of government to connect data initiatives and work together, and align their efforts, to generate the maximum impact and value through data.

## Focus areas >

## Goals >

## Future state/Outcomes >

Investing in making the right data available at the right time	 Easy and efficient access to data	 The right data is available	 Data is consistent and high quality
Growing data capability and support for good practice	 Common standards and practices are consistently applied	 The skills to extract the maximum value	 Data is interoperable and linkable
Building partnerships within and outside government	 Clearer roles for who governs and stewards data	 Partnerships to collaborate and innovate with data	 Embed Te Ao Māori across the data value chain
Implementing open and transparent practices	 High levels of trust and confidence from the public	 Clear rules and protection mechanisms in place and consistently applied	

**New Zealanders** are empowered to:

- Actively participate in decision-making
- Hold government to account
- Use data to improve their wellbeing

**New Zealanders** are encouraged to:

- Collaborate to solve complex problems
- Push the boundaries of what’s possible with data through technology, interoperability, and common standards

**Organisations** have the right data to:

- Provide intuitive, people-centric, and timely services
- Respond to unique needs and preferences
- Tailor and seamlessly deliver services

**Government** can rely on data to:

- Tackle big issues facing New Zealand
- Inform evidence based decision-making
- Evaluate and monitor progress
